

The One Nation 'hybrid' Bradfield Scheme is a Clayton's Bradfield Scheme – the Bradfield Scheme you are having when you are not having a Bradfield Scheme.

One Nation committed in January 2017 to a **'hybrid' Bradfield Scheme approach** to water security to drought-proof the State and made a number of public statements and a members bill mentioning Bradfield. A Bradfield Scheme must, by definition surely, include the transfer of water from coastal rivers across the Great Dividing Range in order to benefit inland areas. It may optionally include transporting water to the Murray-Darling Basin. But the building of a scheme to transfer of water inland or to the MDB is not mentioned in the list of projects on the PHON water policy webpage.

One Nation will:

1. Support the Commonwealth in building additional capacity on the Burdekin catchment through raising the Burdekin Falls Dam supporting Townsville and the Galilee and Bowen Basins mining operations and Lower Burdekin irrigation.
2. Support the selection of storage options in the Fitzroy catchment.
3. Urgently examine the opportunities for dam level raising in the south-east.
4. Cost the Nathan Dam and pipelines project for water security for mining, power, urban and agriculture users in the Surat Coal Basin and Dawson-Callide region.

[*PHON Water Security policy*](#)

No mention of the transfer of water from coastal rivers across the Great Dividing Range in order to benefit inland areas or the Murray-Darling.
